

AI-Based Contract Understanding (Core USP)

Kya unique hai:

System legal contracts (PDF/DOCX) ko **automatically read aur samajh** leta hai using **LLMs + NLP**.

Kya extract karta hai:

- License start & end date
- Territory (India, Global, etc.)
- Platform rights (Mobile, TV, Web)
- Exclusivity clauses

📌 Why important:

Manual contract reading eliminate ho jaata hai, jo sabse bada pain point hai OTT companies ka.

2 Rights Intelligence (Knowledge Graph Approach)

Kya unique hai:

Rights ko simple text ya Excel ki jagah **relationships ke form mein model** kiya jata hai.

Example:

CSS

Copy code

Content → allowed in → India

Content → valid till → 31 Dec 2025

Content → platform → Mobile/Web

📌 Why important:

System complex questions ka answer de sakta hai:

👉 "Is this content allowed here, now?"

3 Real-Time Compliance Monitoring (Game Changer)

Kya unique hai:

System **content ke play hone ke exact moment pe** compliance check karta hai.

🔊 Playback event आते hi:

- Country check
- Date check
- Platform check

📌 Why important:

Most existing systems violations **baad mein** detect karte hain, jab damage ho chuka hota hai.
Our system **preventive** hai, reactive nahi.

4 Hybrid Violation Detection (Rules + AI)

Kya unique hai:

- Rules → hard legal constraints (date, region)
- AI → context & ambiguity (grace period, renewals)

📌 Why important:

- Pure rules → too many false alerts
 - Pure AI → legal risk
 - **Hybrid approach = best balance**
-

5 Explainable & Clause-Level Alerts (High Trust Feature)

Kya unique hai:

Har violation alert ke saath:

- Exact contract clause
- Plain-English explanation
- Evidence (date, region, platform)

📌 Why important:

Legal teams blindly AI pe trust nahi karti.

Explainability trust aur adoption dono badhati hai.

6 RAG (Retrieval-Augmented Generation) for Legal Safety

Kya unique hai:

LLM sirf wahi jawab deta hai jo **actual contract data se retrieve** hua ho.

📌 Why important:

- AI hallucination almost zero
 - Legal accuracy high
 - Production-grade legal AI possible
-

7 Human-in-the-Loop Feedback System (Learning Engine)

Kya unique hai:

Legal team ke feedback se system:

- False positives kam karta hai
- Contract understanding improve karta hai
- Company-specific patterns seekhta hai

📌 Why important:

System **time ke saath better hota hai**, static nahi rehta.

8 Automated Corrective Actions (Damage Control)

Kya unique hai:

Violation detect hote hi system:

- Content unpublish kar sakta hai
- Legal team ko notify karta hai
- Renewal workflow trigger karta hai

📌 Why important:

Legal risk ko **seconds mein control** kiya ja sakta hai.

9 Scalable, Cloud-Native & Event-Driven Architecture

Kya unique hai:

- 100 titles se 10,000+ titles tak scale
- Millions of playback events handle
- Real-time without performance drop

📌 Why important:

OTT platforms fast grow karte hain — system bhi grow karta hai.

10 Built Specifically for OTT Compliance (Not Generic DRM)

Kya unique hai:

Ye system:

- Piracy control nahi
- DRM encryption nahi
- **Pure rights intelligence & compliance automation** hai

 Why important:

Most tools DRM ya finance pe focus karte hain,
ye system **legal risk & compliance** pe focus karta hai.
